

Table 1) Pearson Correlation Coefficient between the life quality dimensions with psychological tenacity and spiritual health

Life Quality Dimensions	Psychological Tenacity		Spiritual Health	
	Correlation Coefficient	Significance Level	Correlation Coefficient	Significance Level
Physical Operation	0.085	0.357	0.049	0.594
Role Limitation due to Physical Condition	0.210	0.025	0.168	0.061
Physical Pains	0.043	0.645	0.103	0.263
General Health	0.091	0.322	0.124	0.179
Vitality	0.193	0.035	0.104	0.257
Social Function	0.086	0.348	0.130	0.158
Role Limitation due to Emotional Problems	0.206	0.024	0.093	0.312
Emotional Health	0.024	0.795	0.118	0.200

Table 2) Linear regression results for predicting life quality through psychological tenacity and spiritual health

Variable	Regression Coefficient (β)	Standard Error	Slope	Significance Level	Coefficient of Determination(R^2)*
Psychological Tenacity	15.702	252.76	0.280	0.002	
Spiritual Health	8.762	247.28	0.219	0.012	11.3%
Fixed Value	1849.592	292.878	-	0.001	

*Results of the second step of the step-wise linear regression
