

Figure 1) Viability in different duration (24 and 48 hours) and intensities of static magnetic field (7, 14 and 21 mT). Dissimilar letters a, b, and c represent significant difference in $p < 0.05$.

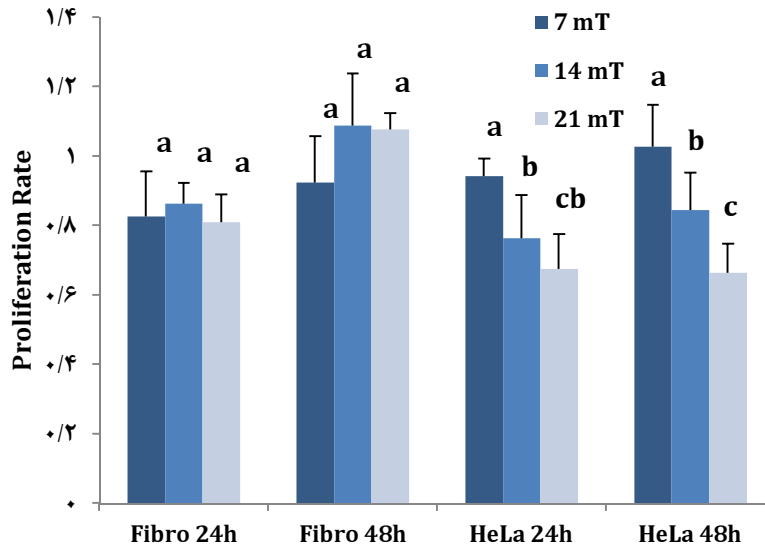

Figure 2) Proliferation rate in different duration (24 and 48 hours) and intensities of static magnetic field (7, 14 and 21 mT). Dissimilar letters a, b, and c represent significant difference in $p < 0.05$.
