

Figure 1) Growth of five species of *Candida* fungi against extracted metabolites compared with negative control (well)

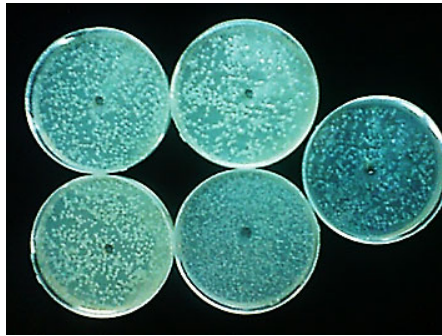

Figure 2) Growth of five species of *Candida* fungi against the pure Iturin A purchased from Sigma (well)

Figure 3) Formation of germ tube of *Candida albicans* fungus after 2.5 hours of incubation in blood serum (control)

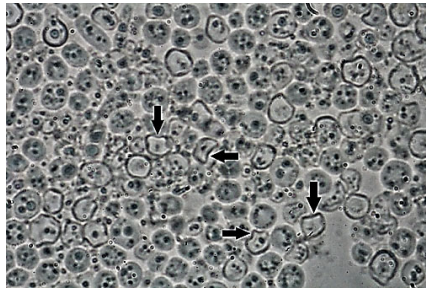

Figure 4) Absence of formation of germ tube and surface degradation of *Candida albicans* treated with 50 μ l of extracted lipopeptide after 2.5 h incubation in blood serum

Figure 5) Absence of formation of germ tube of treated *Candida Albicans* with 50 μ L of Iturin A after 2.5 h incubation in blood serum.
