

Table 1. The absolute and relative frequency of demographic information of veterans' spouses (n=306)

Variables	No.	%
Age, year		
40-49	96	31.4
50-59	163	53.3
Over 60	47	15.4
Educational level		
Below diploma	43	14.1
Diploma	113	36.9
Associate degree	123	40.2
Bachelor	27	8.8
Percentage of spouse's injuries		
<10%	71	23.2
10-20%	102	33.3
20-30%	54	17.6
30-40%	43	14.1
>40%	36	11.8
Type of injury		
General injuries	183	59.8
Chemical	63	20.6
Psychological Disorders	60	19.6
Approximate family income, million		
<1	9	2.9
1-2	94	30.7
2-3	193	63.1
>3	10	3.3

Table 2. The mean of emotional cognitive regulation strategies, resilience and emotional empathy in veterans' spouses

Variables	Scores mean	Min	Max
Positive Strategies	72.54±1.93	45	96
Negative Strategies	45.04±2.08	34	65
Resilience	76.73±2.04	35	89
Emotional empathy	230.20±6.12	150	269

Table 3. Multiple regression test results for prediction of emotional empathy by emotional cognitive regulation strategies and resilience

Variables	Standard error	Non-standardized coefficient B	Standardized coefficient	t	P value
Constant	5.16	1.84	-	2.80	0.05
Resilience	2.56	0.06	0.87	42.29	0.01
Positive emotion regulation strategies	1.38	0.260	0.08	4.90	0.001
Negative emotion regulation strategies	-0.022	-0.026	0.005	-0.608	0.435
