

Table 1. The absolute and relative frequency of the information recorded in the cases' records (77 records)

Variables	No.	%
The deceased gender		
Male	49	63.6
Female	28	36.4
The deceased age group (year)		
1-10	1	1.3
11-20	3	3.9
21-30	6	7.8
31-40	7	9.1
41-50	8	10.4
51-60	7	9.1
61-70	14	18.2
71-80	15	19.5
81-90	14	18.2
Over 90	2	2.6
The interrogator position		
Special investigator for death	58	75.3
Police Criminal Investigation Department	1	1.3
Judge	6	7.8
Police station officials	11	14.3
General court	1	1.3
The interval between injury and death		
Less than one hour	16	20.8
Less than six hours	2	2.6
Less than one day	11	14.3
Less than one week	22	28.1
Less than 1 month	18	23.4
Over 1 month	6	7.8
Unknown	2	2.6

Table 2. The absolute and relative frequency of variables related to the professional viewpoints about the records (77 records)

Variables	No.	%
Announcing the injury		
Contagious	61	79.2
Non-contagious	2	2.6
Minor impact	14	18.2
The type of non-contagious injuries		
Minor injuries	37	48.1
Fractures of the upper extremity	1	1.3
Femoral fractures	19	24.7
Spinal fractures	2	2.6
Cerebral hemorrhage	1	1.3
Abdominal and pelvic bleeding	1	1.3
No non-contagious injury	16	20.8
The type of contagious injuries		
Multiple bodily injuries	29	37.7
Multiple bone fractures	16	20.8
Cerebral hemorrhage	11	14.3
Internal bleeding (chest, abdomen, pelvis)	9	11.7
External hemorrhage (deep open lower extremity injuries)	2	2.6
Others	10	13.0
