

**Table 1)** Marital satisfaction in men without children and men with first and second children

<b>Satisfaction</b>	<b>Without children</b>	<b>First child</b>	<b>Second child</b>
<b>Much dissatisfaction</b>	0	0	0
<b>Relative dissatisfaction</b>	1.7%	3.3%	8.3%
<b>Relative satisfaction</b>	20%	31.7%	28.3%
<b>Much satisfaction</b>	61.7%	51.7%	53.3%
<b>Very much satisfaction</b>	16.7%	13.7%	10%

**Table 2)** Correlation coefficient between marital satisfactions of men with difficulty of passage parenting, support of parents, relatives, and health centers

Variable	Marital satisfaction of men	
	p value	r
Passage parenting	p<0.001	-0.40
Support of parents	0.02	0.17
Support of relatives	p<0.001	0.19
Support of friends	p<0.001	0.30
Support of health centers	0.04	0.14

The type of test is Spearman correlation coefficient and significance level is p<0.05.

**Table 3)** Correlation coefficient of marital satisfaction of men with 4 dimensions of difficulty of passing parenting

Dimensions of difficulty of passing parenting	Marital satisfaction of men	
	p value	Correlation coefficient
<b>Dimension 1: Parents' responsibilities and limitations</b>	p<0.001	r=-0.34
<b>Dimension 2: Satisfaction of parents</b>	p<0.001	r=-0.40
<b>Dimension 3: Fondness and marital stability</b>	0.07	r=-0.16
<b>Dimension4: Personal commitment</b>	0.057	r=-0.17

The type of test is Pearson correlation coefficient and significance level is p<0.05.
